

Supply Chain Management Managed Services

Through the proper outsourcing model, companies can offset financial and business risks by leveraging their operations, bring added value by concentrating on key functional areas of the business, and develop new business while gaining a competitive edge through greater efficiency and productivity.

The Tagos Group works with clients to outsource their day-to-day management of Materials and Inventory Management, Logistics and Transportation Management, and Third-Party/Customer-Owned Property Yard Management. Tagos shares our clients' risks and rewards and our value proposition is structured around each client's financial and business objectives.

OUR COMPETITIVE ADVANTAGE

- Deliver business value along with the ability to manage or cut costs
- Share financial and business risk through performance-driving or revenue-sharing price structures
- Establish metrics, from the start, to assist clients in evaluating and communicating results to leadership
- Provide a clear project scope and performance indicators to prevent our internal clients from feeling any loss of control over the project
- Ensure complete transparency and accountability when presenting our business case and value proposition
- Supply industry-specific infrastructure so clients can scale rapidly, develop new business, and operate more efficiently and productively
- Operate in parallel with the client to effect rapid yet non-disruptive change
- Provide next-generation business processes and procedures so companies can address their broader business challenges and visions

OUR HISTORY

The Tagos Group was founded in 2007 as a supply chain integrator by a team of professionals with executive supply chain and corporate leadership experience in the energy sector.

With our extensive background in creating and implementing strategies and solutions for Fortune 500 companies, we soon attracted the attention and gained the trust of leaders across the energy sector. Our consistent delivery of excellent services, solutions, and value to our customers has impressed existing clients, who have continued to award us new business.

OUR VALUES AND MISSION

We strive to be a leading provider of supply chain services, oil field services, outsourced technology and procurement services, proppant, and concrete supplies that deliver sustainable and continuous improvements to our customers.

- Understand our clients' operational objectives and needs
- Recommend and implement measurable operational improvements
- Leverage strategic relationships for the benefit of our clients

Supply Chain Management Managed Services

FUNCTIONAL AREAS

Materials and Inventory Management

Knowing what inventory is on hand, where materials are in use, and what supplies will be needed in the near future is critical to operations. Without a perfect balance of supply and demand, companies lose revenue. Tagos' team has decades of experience in operations as well as in consulting. We offer a broad range of services in areas including Central and Decentralized Distribution Modeling, Warehouse Performance Analysis, and Inventory Planning, Management and Optimization.

Logistics and Transportation Management

In today's global economy, rising energy prices dictate that companies focus on all components of the Total Cost of Ownership (TCO). Logistics and transportation costs can be a significant component and represent an area in which supply chain management can deliver immediate and sustainable value. Tagos integrates technologies that optimize work effort, including WMS, RFID, and TMS. We also provide order and payment management as well as services ranging from sourcing and procurement to network optimization and operational management. Our highly qualified professionals address all issues related to warehousing, distribution, material logistics, order fulfillment, and transportation across the majority of industries.

Third-Party/Customer-Owned Property Yard Management

A common area of emphasis for our clients is the care, control, and visibility of the materials owned at supplier yards. At The Tagos Group, we have provided multiple solutions designed to address this issue. We have dedicated professionals who serve as "boots on the ground," working with suppliers on behalf of our clients. Through this dedicated effort, our clients have the necessary confidence in the data to impact their businesses. Whether it's utilizing surplus materials for current production projects, consolidating inventory, or liquidating surplus, The Tagos Group has the experience necessary to support each client's specific objectives.

Warehouse Design & Operations

Whether constructing a new warehouse or redesigning an existing one, facility design is critical in the management of supply. How the warehouse layout is designed, how storage system, equipment, order picking methods and IT solutions are adopted greatly impact the process design and result in big variance of efficiency and cost. The Tagos Group has designed and implemented warehouses, distribution centers and preservations and maintenance facilities for many Fortune 50 companies in various industries.

Outsourced Technology Solutions

Tagos' Outsourced Technology and Procurement Services team delivers a combination of deep technical knowledge and broad industry vision to help you build client-facing technology solutions. Tagos understands the value of utilizing information technology to support key areas of operations. Our highly qualified and dedicated team delivers value-added solutions to our customers in both the public and private sectors, drawing on more than 25 years of experience working predominately in the energy and manufacturing industries. We offer a broad range of services in areas including Master Data Management, Cleansing and Enrichment, Advanced Tracking/Track and Trace (RFID, GPS, etc.), Procure-to-Pay (P2P) eCommerce, ERP/Enterprise Asset Management, and Custom Web-Based Portal Development.
